GOOSEBUMPS

STICKER PACK

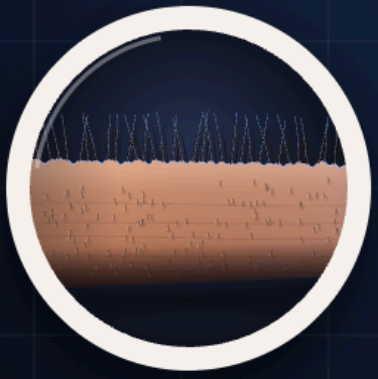

PUFFED CAT

FLUFFY FOX

THE HAIR MUSCLE

GOOSEBUMPS

I HAVE CHILLS

A COAT

SONG CHILLS

ONE HAIR UP

Print, cut, stick them on everything. Send the pack to the friend who gets chills at every song.

BODY GLITCHES · EP 02

WHY YOU GET GOOSEBUMPS

- Under every hair there is a tiny muscle (the **arrector pili**). When you are cold or scared, it squeezes and the hair stands up.
- In furry animals, raised fur traps warm air, and a scared cat puffs up to look twice as big.
- The same reflex fires for a scary movie, or a song you love.
- In 2020, Harvard scientists found that same muscle is wired to the stem cells that grow hair. In mice, long-lasting cold set off goosebumps and woke those cells up to grow new hair.

So your goosebumps aren't useless. They might be your skin, still trying to grow you a coat.
